The global Airplane Landing Gear Maintenance, Repair, and Overhaul (MRO) market size is predicted to grow from US\$ 4541 million in 2025 to US\$ 9050 million in 2032; it is expected to grow at a CAGR of 10.6% from 2026 to 2032.

As an important part of the aircraft, the landing gear bears the important responsibility of landing the aircraft safely in any harsh environmental conditions. In addition to being subject to corrosion, the landing gear also undergoes various stresses during each takeoff and landing of the aircraft. Although its regular overhaul cycle is 8 years and there are relatively few failures during operation, its maintenance work is very important because it is related to the safe landing of the aircraft and the safety of passengers. Airplane Landing Gear Maintenance, Repair, and Overhaul (MRO) is usually provided by a professional aviation maintenance company or the airline's internal maintenance team. These services include but are not limited to: parts repair, surface treatment, non-destructive testing, heat treatment, shot peening and other special process capabilities, machining capabilities, engineering technical services and customer services, etc.

The Airplane Landing Gear Maintenance, Repair, and Overhaul market represents a critical and regulation-intensive segment within the broader aviation aftermarket. Demand is fundamentally driven by global fleet size, aircraft utilization rates, and mandatory overhaul intervals established by aviation authorities. Landing gear systems are among the most structurally stressed components of an aircraft, resulting in predictable maintenance cycles and recurring overhaul requirements throughout an aircraft's service life. The market is characterized by high technical barriers, certification requirements, and strong relationships between airlines, original equipment manufacturers, and independent MRO providers. As fleets age and airlines seek to

optimize lifecycle costs while maintaining safety compliance, landing gear MRO services remain a stable revenue source within the aviation value chain.
