Airport chair primary features are two pieces of a durable material, attached as back and seat to one another at a 90° or slightly greater angle, with usually the four corners of the horizontal seat attached in turn to four legs—or other parts of the seat's underside attached to three legs or to a shaft about which a four-arm turnstile on rollers can turn—strong enough to support the weight of a person who sits on the seat and leans against the vertical back.

The North American region is projected to dominate the airport beam chairs market in future and the Asia Pacific region is projected to be the fastest-growing market during the forecast period.
