Airports are constantly seeking new methods to improve their operational efficiencies and enhance passenger air travel. Airport information systems support the business goals of ensuring an efficient, passenger-friendly, and cost-effective airport operation. They also interface and integrate most of the electronic information within the airport, thus ensuring the smooth flow of information for operations, management, and security. The airport operations control center (AOCC) ensures maximum productivity with the aid of process automation and high efficiency in operations, revised deployment of personnel in core functions and progression capabilities, improved safety protocols, and more impactful organizational contribution through trend analysis and forecasting.

The main companies of Global Airport Information Systems (AIS) include Amadeus IT Group, IBM, Thales Group, etc. These top three companies hold a market share about 37%. North America and Europe are the main production regions in the world. The product is mainly used in national airports, followed by regional airports.
