Airport Laser Bird Repellent is a modern, non-lethal technology used to deter birds from airports and their surrounding areas. This technology is designed to reduce the risk of bird strikes, which can be hazardous to both aircraft and wildlife.

The Airport Laser Bird Repellent market revolves around advanced, non-lethal laser systems designed to deter birds from airport environments by projecting moving laser beams that birds perceive as a threat. These automated handheld or fixed units often with adjustable green laser wavelengths are integrated into wildlife hazard management programs to reduce bird strikes without harming wildlife or disrupting operations. They feature long-range coverage, programmable patterns, weather-resistant construction, and compliance with aviation safety standards. The technology is favored at civil and military airports for its high effectiveness, real-time monitoring, and low maintenance, and is increasingly used in other sensitive sites like solar farms and food facilities.
