The global Airport Marking Machine market size is predicted to grow from US\$ 878 million in 2025 to US\$ 1169 million in 2032; it is expected to grow at a CAGR of 4.3% from 2026 to 2032.

An airport marking machine is a specialized piece of equipment used for applying precise markings on runways, taxiways, aprking areas, and other critical surfaces at airports. These markings are crucial for maintaining the safety, organization, and proper functioning of an airport. The markings help guide pilots, ground crews, and vehicles by indicating runways, taxiways, parking spots, and other important areas. In 2024, global Airport Marking Machine production reached approximately 20,127 units, with an average global market price of around US\$ 42,779 per unit. A single production line has a production capacity of 500 units and a gross profit margin of about 40%.

Upstream core features:

Navigation and control system: This is the 'brain' of the high-end airport marking machine, which determines the marking accuracy.

Spraying systems: the “hand” of execution.

Power system: engine.

Upstream structural and functional materials:

Steel/Aluminum: Used to manufacture racks, tanks, etc.

Paint storage tank: requires corrosion resistance, stirring and heating functions.

Electrical components: sensors, relays, wiring harnesses, PLC (programmable logic controller)

A marking machine, also known as a marking machine, is used for road construction to mark and mark lines. According to the process, it can be divided into six series: hot melt kettle, hot melt marking machine, cold spray marking machine, two-component marking machine, wire removal machine, and auxiliary series.

The hot melt kettle is the main equipment for melting paint in hot melt marking construction. The heating temperature is 0-300 °, and the paint is dissolved into a paste by heating. It is suitable for various types of road marking projects and is an essential equipment in hot melt marking construction.

Hot melt marking machine is a specialized equipment used in hot melt marking construction, which is used to mark straight lines, dashed lines, curves, arrows, text, etc. on construction road surfaces such as highways and urban roads. Self propelled hot melt marking machines and electric hot melt marking machines are commonly used on the market, which can significantly improve construction efficiency and reduce construction intensity. In addition, there is a hot melt integrated machine that combines melting material and marking, which can independently complete the marking of various types of lines. It is more practical for small-scale, scattered and complex parking spaces, yards, communities, warehouses, dock construction, etc.

Cold spray marking machine is a specialized equipment for road marking at room temperature. Suitable for various straight lines, dashed lines, guide lines, zebra crossings, text, graphics, etc. on highways, urban areas, squares, parking lots, airports, etc.

The two-component marking machine is a specialized equipment used in two-component construction, which has been selected by the national standard in recent years for the construction of reflective road surfaces. It is suitable for road surface construction with requirements for reflection.

Road line removal machine is a specialized equipment used to remove old and damaged hot melt and cold paint markings. The widely used equipment on the market now is a high-pressure water line removal machine with recycling function. It can not only remove the lines on the road surface without damage, but also synchronously

recover the waste residue and wastewater after line removal, and then classify the garbage. It is currently the most efficient equipment for line removal construction.

Auxiliary series: Auxiliary equipment used in marking construction includes hair dryers, bottom oil machines, cleaning machines, etc. Prior to construction, the road surface is pre treated to improve construction efficiency and reduce construction intensity.
