The report requires updating with new data and is sent in 48 hours after order is placed.

Cloud-based access control and credentialing systems will assist airport management in addressing these and other security concerns. Furthermore, since access control systems - as well as integrated operating systems - now capture operational data, the data is now available for not only analysis and auditing, but also preparing and supporting operational changes throughout the airport complex. These technologies enable airport security to better track facilities and personnel while also sharing data across multiple networks, resulting in increased situational awareness and overall security.
