The global Airway Compression Clip market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

As a medical device, airway compression clamps are mainly used to close the airway by compressing the trachea during medical treatment. Within the scope of endobronchial blockers, the working principle of this device is similar to the lung volume expansion operation, but it is simpler, easier and safer. Specifically, the airway compression clamp can accurately control ventilation without invading the airway, thus reducing trauma to the patient. At the same time, it is usually equipped with a camera and light source, allowing doctors to accurately check the airway condition on the screen, which is easy to operate and highly visualized.

As an advanced medical device, airway compression clamps have made continuous progress in technology. With the in-depth research on materials science, manufacturing processes and biocompatibility, the design of airway compression clamps has become more reasonable, the use has become more convenient, and the safety has been significantly improved. The scope of application has gradually expanded. It is not only widely used in traditional thoracic surgery and lung surgery, but also shows its unique value in some emerging medical fields such as interventional treatment and emergency treatment. With the intensification of market competition and the need for corporate development, the airway compression clamp market is also facing the trend of mergers and acquisitions. Some companies gain technological advantages, market share and brand influence through mergers and acquisitions; while others enhance their market competitiveness by integrating resources, optimizing processes and improving efficiency. In summary, the airway compression clamp market presents a positive

development trend, and in the future, the airway compression clamp market is expected to achieve a broader development prospect.
