The global Airway Management Tubes and Intubation Accessories Devices market size is predicted to grow from US\$ 1734 million in 2025 to US\$ 2828 million in 2032; it is expected to grow at a CAGR of 7.4% from 2026 to 2032.

Airway Management Tubes are widely used in operation theaters, emergency departments, and intensive care units to establish and maintain adequate ventilation for patients. Intubation Accessories are used in conjunction with endotracheal, tracheostomy, and endobronchial tubes for advanced airway management in surgical procedures requiring routine anesthesia as well as the maintenance of imperiled airways. The primary driver for the Airway Management Tubes and Intubation Accessories market growth is the increasing number of surgical procedures wherein airway management tubes are used to maintain a patent airway.

Respiratory disorders have a significant public health challenge, affecting millions of people worldwide. The rise in the incidence of respiratory disorders, like asthma, chronic obstructive pulmonary disease (COPD), and respiratory infections, has generated a substantial demand for airway management solutions. As the number of individuals diagnosed with these conditions increases, the demand for interventions that facilitate effective airway management increases. Aged individuals are more susceptible to respiratory conditions due to age-related changes in lung function and increased susceptibility to infections. The aging population in many parts of the world leads significantly to the surge in respiratory disorders. As the proportion of the elderly population grows, the prevalence of respiratory disorders, demands the use of airway management tubes and intubation accessories to offer critical respiratory support. Further, the lifestyle factors, environmental pollution, and occupational hazards leads to

the increasing incidence of respiratory issues. The resultant growth in the overall prevalence of respiratory disorders underscores the demand for advanced medical devices, including airway management tubes and intubation accessories, to help in patient care and treatment. Urbanization, exposure to air pollutants, and certain occupational exposures can exacerbate respiratory conditions or lead to the development of new cases.
