Anesthesia equipment is often used by medical professionals during surgical procedures to help prevent a patient from feeling pain and relax surrounding muscles. Oftentimes, anesthesia can make a patient drowsy or even unconscious, both of which are completely normal reactions to the medicine. During the procedure, an anesthesiologist will monitor the patient's vitals to ensure their well-being, and also regulate the amount of anesthesia being administered. However, doing both simultaneously can be difficult if a facility's monitoring equipment is outdated or not user-friendly.

The global airway and anesthesia devices market are expected to witness substantial growth over the forecast period on account of the increasing air pollution and respiratory

problems among people. The airway devices market is expected to grow considerably as the used in surgeries to pump oxygen and anesthetic gases in the patient's body to keep him sedated and at the same time maintaining the rate of breathing. The anesthesia devices market is expected to grow substantially owing to increasing rate of surgeries with increasing rate of population. A huge geriatric population base is prone to health related problems such as cardiac disorders and respiratory diseases which act a major driver for the growth of the airway and anesthesia devices market. In North American market the airway and anesthesia market is expected to grow substantially owing to the increasing geriatric population and high standard of living. Asia Pacific market is expected to grow over the period owing to the increasing population and rising consumer disposable incomes. In countries such as India and Japan governments have shown their interest and have taken initiatives to provide a better healthcare and medical facilities for the people.
