Alarm rationalization is an alarm management technique that helps improve operator response by reducing the alarm burden and eliminating redundancy and false alarms. Alarm rationalization is a routine working process used to assess all potential against recognized principles in the Alarm Principles document to identify what is a legitimate alarm, to design for it, and grounds for confinement including reasons, consequences, and corrective actions that can be used to guide operator response. The main purpose of a rationalization alert is to ensure that each alert notified to the operator is a quality alert.
