A breath analyzer, or commonly known as a breathalyzer, is a device – often portable – that can help law enforcement officers detect the presence of alcohol in a person's breath. The instrument can help determine how much alcohol a person has consumed, allowing the official to take the necessary action depending on the offence. Although the name 'breathalyzer' was a trademark registered in 1954, it is commonly used as a common noun to describe any instrument that performs the above function.
