The global Algae Controller market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Algae controller is a device specially designed to control the growth of algae in water bodies. It uses physical, chemical or biological methods to effectively inhibit the excessive reproduction of algae, thereby improving water quality and protecting the ecological balance of water bodies. Unlike algae treatment methods that rely on chemicals, algae controllers usually do not directly add chemical agents to water bodies, but use physical means such as ultraviolet disinfection, ultrasonic treatment or mechanical filtration to destroy the cell structure of algae or prevent its growth and reproduction. Algae controllers are widely used in freshwater lakes, reservoirs, swimming pools, landscape water bodies and other places. It not only helps to maintain the clarity and beauty of water bodies, but also prevents the deterioration of water quality caused by excessive algae reproduction and protects the living environment of aquatic organisms. In addition, for humans, the use of algae controllers can also reduce health problems caused by algae, such as skin diseases and respiratory diseases.

United States market for Algae Controller is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
