The global Algae Protein Hydrolysates market size is predicted to grow from US$ 340 million in 2025 to US$ 758 million in 2032; it is expected to grow at a CAGR of 12.3% from 2026 to 2032.

In 2024,global algae protein hydrolysates production reached approximately 15,546 ton, with an average global market price of around USD 20,000 per ton. A factory gross profit of USD 5,000 per ton with 25% gross margin. A single line full machine capacity production is around 200 ton per line per year. downstream demand is concentrated in Agriculture followed by Food & Nutraceuticals, Animal & Aquafeed and Cosmetics & Personal Care. An algal protein hydrolysate liquid is formulated into a foliar product and sprayed on greenhouse tomatoes to improve fruit set and drought resilience. Algae protein hydrolysates are the product of a process where proteins from algae are broken down into smaller peptides and free amino acids through a process called hydrolysis. This modification increases their solubility and makes them more digestible, improving their nutritional and functional properties. They are used as ingredients, biostimulants, and supplements due to their beneficial compounds.
