Alginate gel cell culture medium is a medium for in vitro cell culture that contains alginate as a gel matrix. Usually, alginate gel cell culture medium mixes cell culture medium with an appropriate amount of alginate to form a gel-like scaffold to support and maintain cell growth and differentiation. This gel scaffold can simulate the three-dimensional structure and microenvironment of biological tissues, provide the support and growth factors needed by cells, and thereby promote cell proliferation and functional expression. Alginate gel cell culture media is commonly used in research fields such as tissue engineering, regenerative medicine, drug screening, and disease modeling.

The global Alginate Gel Cell Culture Medium market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
