Alginate gel is a gel-like substance made from a mixture of alginate and water. Alginate is a natural polysaccharide, usually extracted from seaweed, with good biocompatibility and biodegradability. The mechanism by which it forms a gel in water involves the interaction between calcium ions and alginate molecules, forming a three-dimensional network structure. Alginate gels are often used as biomaterials in the biomedical field for applications such as cell culture, tissue engineering, drug delivery, and bioprinting.

The global Alginate Gel market size is projected to grow from US\$ 833 million in 2024 to US\$ 1130 million in 2030; it is expected to grow at a CAGR of 5.2% from 2024 to 2030.
