Alginic acid, when used as a food thickener, is typically derived from brown seaweeds. In its natural form, alginic acid isn't soluble in water, but when it's converted into its salt forms—most commonly sodium alginate—it becomes highly soluble and useful in food applications. Sodium alginate is used in food manufacturing to increase viscosity, stabilize emulsions, and improve texture. It can be found in a variety of products such as ice cream, salad dressings, dairy desserts, bakery fillings, and meat products.

The global Alginic Acid for Food Thickener market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
