The global Alicyclic Dicarboxylic Acid market size is predicted to grow from US\$ 1113 million in 2025 to US\$ 1616 million in 2032; it is expected to grow at a CAGR of 5.5% from 2026 to 2032.

Alicyclic dicarboxylic acids are a class of organic compounds containing two carboxyl groups (-COOH) attached to a saturated or partially saturated cyclic (non-aromatic) hydrocarbon ring, such as cyclohexane or cyclopentane structures; typical examples include cyclohexane dicarboxylic acid and hydrogenated phthalic acid derivatives. The supply chain starts upstream with petrochemical or bio-based feedstocks (e.g., cycloalkanes, cycloalkenes, or aromatic precursors like phthalic anhydride that undergo hydrogenation), which are processed through oxidation, catalytic hydrogenation, or ring-functionalization reactions to form the alicyclic diacid intermediates. Midstream production involves purification, crystallization, and grading (industrial vs. high-purity), often integrated within specialty chemical manufacturing systems. Downstream, these materials are widely used in engineering plastics (e.g., polyamides, polyesters), coatings, plasticizers, lubricants, and specialty resins, especially where improved thermal stability, flexibility, and UV resistance are required compared to aromatic counterparts, with end-use industries including automotive, electronics, construction, and high-performance materials. In 2025, global Alicyclic Dicarboxylic Acid output was about 650,000 tons with 900,000 tons of capacity, average prices of USD 1,500-4,000 per ton, and gross margins around 22%.
