The global Aliphatic Epoxy Resin market size is predicted to grow from US\$ 3765 million in 2025 to US\$ 6013 million in 2032; it is expected to grow at a CAGR of 7.0% from 2026 to 2032.

Aliphatic Epoxy Resin is a class of epoxy polymers derived from aliphatic (non-aromatic) compounds, typically produced by epoxidizing aliphatic olefins or glycidylating aliphatic alcohols, resulting in resins with excellent UV resistance, low viscosity, and superior weatherability compared to aromatic epoxies; they are widely used in coatings, adhesives, electronics encapsulation, and composite materials where color stability and outdoor durability are critical. The supply chain begins with upstream petrochemical or bio-based feedstocks such as propylene, glycerol, or aliphatic diols, which are converted into intermediates like epichlorohydrin and aliphatic glycols, followed by chemical synthesis (e.g., epoxidation or glycidylation) by resin manufacturers (e.g., Huntsman Corporation, Olin Corporation, Aditya Birla Chemicals, Kukdo Chemical), then formulation by downstream compounders into tailored systems (with curing agents and additives), and finally distribution to end users in industries such as automotive coatings, wind energy composites, electrical insulation, construction sealants, and high-performance industrial coatings. In 2025, global Aliphatic Epoxy Resin output was about 1.6 million tons with 1.8 million tons of capacity, average prices of USD 2,200-4,000 per ton, and gross margins around 24%.
