Alkali-free fiberglass multi-end roving is a type of reinforcement material used in the production of composite materials such as fiberglass reinforced plastics (FRP). It is made up of several individual fiberglass strands or filaments that are bundled together to form a multi-strand roving. The term 'alkali-free' refers to the fact that the roving does not contain any alkaline coating or sizing materials, which can degrade the strength of the fiberglass and compromise the integrity of the composite material. The use of alkali-free fiberglass multi-end roving helps to produce high-quality, durable, and lightweight composite materials for a variety of industrial applications.
