The global Alkaline Cyanide-free Galvanizing Brightener market size is predicted to grow from US\$ 65.44 million in 2025 to US\$ 100 million in 2032; it is expected to grow at a CAGR of 6.4% from 2026 to 2032.

In 2024, global Alkaline Cyanide-free Galvanizing Brightener production reached approximately 185000 tons, with an average global market price of around US\$ 320 per ton. Alkaline cyanide-free zinc brighteners are additives used in alkaline cyanide-free zinc plating processes, primarily to improve the appearance and performance of the zinc coating. Without the use of highly toxic cyanide, they achieve a brighter, smoother surface through the synergistic effects of organic or inorganic compounds, while also enhancing the coating's adhesion, ductility, and corrosion resistance.

The Alkaline Cyanide-free Galvanizing Brightener market is a segment of the metal finishing industry focused on surface treatment chemicals that improve the appearance and corrosion resistance of galvanized metals without the use of cyanide, which is highly toxic. These brighteners are primarily used in steel and iron galvanizing lines to produce shiny, uniform coatings while complying with increasingly stringent environmental and workplace safety regulations.
