The global Alkaline Refractories market size is predicted to grow from US\$ 14050 million in 2025 to US\$ 17950 million in 2032; it is expected to grow at a CAGR of 3.6% from 2026 to 2032.

The alumina in alkaline refractories also helps to enhance the refractory's resistance to slag erosion, improve high-temperature thermoplasticity, and reduce penetration of the slag-brick reaction interface.

With the rapid development of global special steel production, the low-carbon process of alkaline refractory bricks for outside-furnace refining has become increasingly mature and is widely used in special steel outside-furnace refining equipment, greatly extending the service life of outside-furnace refining equipment.

Globally, my country is the largest consumer of refractory materials, accounting for more than 45% of total consumption. Followed by Europe, the consumption share accounts for more than 13%.
