The electric van runs on electric energy powered by the motor; the vehicle does not emit exhaust gas. The e-van consists of a large lithium-ion battery pack and a high-capacity motor for driving. The output from the lithium-ion battery is DC, but the drive motor of electric vehicles is an AC motor. Therefore, an inverter that converts the DC into three-phase AC must also be installed. Some electric vans have petrol engines and are referred to as hybrid vehicles. In a hybrid vehicle, the engine can be used to drive the vehicle when the battery charge is depleted, or the battery can be saved for town and city driving.
