## Abstracts

The global All-electric Injection Molding Machine for Optical Components market size is predicted to grow from US\$ 1761 million in 2025 to US\$ 2676 million in 2032; it is expected to grow at a CAGR of 6.2% from 2026 to 2032.

The all-electric injection molding machine for optical components is a high-precision injection molding equipment specifically designed for the production of optical-grade plastic parts (such as lenses, light guides, and mirrors). It employs a full servo motor drive to achieve nanometer-level repeatability, extremely low molding fluctuations, and a clean, oil-free environment. Its core function is to mold complex optical components in a single operation under ultra-precision, high-cleanliness conditions. This solves the optical defects caused by oil contamination and precision fluctuations in traditional hydraulic or hybrid injection molding machines, such as decreased light transmittance, birefringence, and light spot distortion. It also significantly improves production stability and yield, meeting the increasingly stringent performance requirements of optical plastic parts in consumer electronics, automotive lighting, and medical imaging. The upstream mainly includes ultra-high precision component suppliers (such as nanometer-level ball screws, dedicated servo motors and drivers, corrosion-resistant screw barrels, and closed-loop control systems), as well as optical-grade mold steel and precision machining service providers. The downstream directly connects with end-product manufacturers, covering high-end optoelectronic industries such as mobile phone camera modules (lenses), VR/AR optical lenses, automotive LED lenses, endoscope lenses, and lidar covers, forming a closed-loop industrial chain from ultra-precision manufacturing equipment to core optical components. In 2025, the production of all-electric injection molding machines for optical components will be approximately 6,000 units, with an average price of approximately US\$300,000 per unit, a gross profit margin of approximately 35%, and a single-line capacity of approximately 150 units per year.
