The global All-Solid-State Battery Pilot Line market size is predicted to grow from US\$ 124 million in 2025 to US\$ 426 million in 2032; it is expected to grow at a CAGR of 19.3% from 2026 to 2032.

In 2025, the global production of all-solid-state battery pilot lines reached 18 units, with an estimated average selling price of US\$7.04 million per unit. An all-solid-state battery pilot line is an integrated manufacturing equipment system designed to advance all-solid-state batteries from laboratory formulations and small-scale samples to engineering samples, automotive-grade validation samples, and small-batch trial production. Its core characteristic is the absence of free-flowing liquid electrolytes within the battery cell; instead, sulfide, oxide, polymer, halide, or composite solid electrolytes perform the functions of ion conduction and separation. These lines are used for the screening of solid electrolytes and composite cathode materials, optimization of interface impedance, validation of lithium metal anode processing, development of A/B/C-sample stages, submission of automotive-grade pouch or prismatic cell samples, cycle life and safety testing, yield ramp-up, process window validation, and the subsequent replication of processes for GWh-scale mass production. Downstream applications primarily target new energy vehicles, next-generation high-end power batteries, drones, electric vertical take-off and landing (eVTOL) aircraft, aerospace, robotics, defense power supplies, high-end consumer electronics, and specialized energy storage sectors. The upstream supply chain includes lithium sulfide, sulfide solid electrolytes, oxide electrolytes, halide electrolytes, lithium metal foil, high-nickel cathode materials, conductive agents, binders, current collectors, aluminum-plastic films, metal casings, sealing materials, calendaring rolls, vacuum equipment, dry rooms, glove boxes, inert atmosphere systems, robots, servo systems, laser equipment, pressure equipment, online inspection equipment, and industrial software. The midstream consists of manufacturers

of all-solid-state battery pilot line equipment. The downstream sector comprises solid-state battery enterprises, power battery manufacturers, vehicle OEMs, material companies, research institutes, public pilot-testing platforms, and testing agencies. The gross profit margin ranges from approximately 30% to 45%.
