The global Alloy Molybdenum Slab market size is predicted to grow from US\$ 131 million in 2025 to US\$ 162 million in 2032; it is expected to grow at a CAGR of 3.1% from 2026 to 2032.

In 2024, the output of alloy molybdenum slabs reached 242,449 kilotons, with an average selling price of US\$442.36 per ton. Alloy molybdenum slabs are molybdenum alloy materials containing a certain proportion of other metal elements, usually produced by powder metallurgy. Alloy molybdenum slabs can be made into molybdenum discs, molybdenum plates, molybdenum foils, etc., and have the advantages of high strength, high hardness, high melting point, and strong corrosion resistance. Common alloying elements used in molybdenum alloy slabs include tungsten, niobium, tantalum, titanium, zirconium, etc. The rolling processes for alloy molybdenum slabs include hot rolling and cold rolling. Hot rolling is rolling at high temperature, while cold rolling is rolling at room temperature. The differences between hot rolling and cold rolling mainly lie in the rolling temperature, deformation, microstructure and properties.

Alloy molybdenum slabs are a primary processed form of molybdenum-based alloys (typically 5-50mm thick). By adding rare earth elements (such as lanthanum and yttrium), nickel, and titanium, they form a composite material with a high melting point (approximately 2620°C), high strength, a low coefficient of expansion, and excellent high-temperature oxidation resistance. They are key raw materials for high-end manufacturing sectors such as aerospace, semiconductors, and nuclear power. Driven by the high-end materials market, global demand for alloy molybdenum slabs is relatively stable, but growth is significantly affected by macroeconomic factors and cyclical fluctuations in downstream industries. Asia holds a significant position in the production, processing, and consumption of alloy molybdenum and its slabs, with strong

supply chain integration capabilities and cost advantages. Alloy molybdenum slab production capacity is highly concentrated in China, Japan, and the United States.
