The global Alloy Steel Casting market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Alloy steel castings refer to castings made of alloy steel materials. Alloy steel is a kind of steel with high strength and wear resistance. Its structure and properties are changed by adding alloy elements (such as chromium, nickel, molybdenum, etc.).

Alloy steel castings have the following characteristics: high strength, wear resistance, good corrosion resistance, and wide application. When manufacturing and using alloy steel castings, it is necessary to select the appropriate alloy composition and casting process according to specific requirements to ensure that it meets the needs of the working environment, and to follow the corresponding standards and specifications for processing and use.
