The global Allyloxy Polyethylene Glycol (APEG) market size is predicted to grow from US\$ 27.39 million in 2025 to US\$ 38.43 million in 2032; it is expected to grow at a CAGR of 5.2% from 2026 to 2032.

Allyloxy Polyethylene Glycol (APEG) is a class of high-molecular-weight compounds derived from polyethylene glycol (PEG), chemically modified by introducing allyloxy functional groups at the molecular termini. APEG combines the water solubility and flexible chain structure of PEG with reactive allyl end groups that can further participate in crosslinking, grafting, or photo-curing reactions, making it widely applicable in the synthesis of polymeric materials, surface modifiers, thickeners, emulsifiers, as well as pharmaceutical and cosmetic formulations. Depending on the degree of polymerization, APEG can appear as a liquid or a low-melting-point solid, with molecular weights ranging from several hundred to several thousand Daltons. It exhibits good water solubility and can adjust viscosity, surface tension, and wettability. Additionally, APEG has high chemical stability and can withstand typical acidic or alkaline environments, and the reactivity of its terminal allyl groups makes it an important raw material for preparing polymer crosslinked networks, surface-functional coatings, and drug carriers. In summary, APEG is a multifunctional, highly modifiable, and widely applicable functional polymer. In 2025, the global average selling price is expected to be approximately USD 3,500 per ton, with global sales around 8,000 tons and corporate gross margin approximately 28%.

In the future, the Allyloxy Polyethylene Glycol (APEG) market is expected to maintain steady growth, primarily driven by increasing demand from high-performance polymers, coatings, emulsifiers, and the pharmaceutical and cosmetic industries. With the advancement of functional materials and surface modification technologies,

downstream sectors will increasingly require high-purity, high-molecular-weight, and crosslinkable APEG products, promoting product upgrades and differentiation. Stricter environmental regulations and the adoption of green chemistry principles will further encourage the development of low-toxicity, biodegradable, and sustainable APEG products, while pushing manufacturers to improve production technologies and processes to reduce energy consumption and emissions. The Asia-Pacific region, especially China, Japan, and South Korea, is expected to be the main growth market, fueled by rapid expansion in construction, coatings, and personal care industries. Overall, the APEG market will evolve toward higher value-added, technologically advanced products, with competition increasingly based on innovation, brand influence, and customized solutions. The market outlook for APEG remains broad, with steady expansion potential in the functional chemicals sector.
