AlN ceramic submount is a thermal management component made of aluminum nitride material. It is mainly used in electronic equipment to efficiently conduct and dissipate the heat generated by the equipment. Aluminum nitride ceramic heat sinks utilize the high thermal conductivity and excellent chemical stability of aluminum nitride to maintain stable thermal conductivity in high temperature environments, effectively improve the heat dissipation efficiency of electronic equipment, and ensure the normal operation of the equipment. In addition, aluminum nitride ceramic heat sinks also have high mechanical strength and good electrical insulation properties, and are suitable for heat dissipation solutions for high-power and high-frequency electronic devices. In the fields of smart banking, high-performance electronic devices, optoelectronic devices, etc., aluminum nitride ceramic heat sinks play an important role and provide strong support for the development of modern electronic technology.
