Alumina ceramic insulators are a high-performance insulating material with alumina (Al2O?) as the main component. They have excellent electrical insulation, high-temperature stability and mechanical strength. They are widely used in high-voltage insulation supports, electronic equipment substrates and precision devices in power systems. Their high-purity types (Al2O? content ?99%) are suitable for high-frequency insulation, semiconductor packaging and other high-end fields; in 2024, the global alumina ceramic insulator market size will be approximately US$1.329 billion, mainly driven by UHV power grid construction, new energy grid connection and the demand of the electronics industry. Among them, China occupies a dominant position as a core market and is expected to maintain steady growth in the future.
