## Abstracts

The global Alumina Fibre Felt market size is predicted to grow from US\$ 149 million in 2025 to US\$ 243 million in 2031; it is expected to grow at a CAGR of 8.5% from 2025 to 2031.

The alumina fibre felt is made of high alumina polycrystalline fibre (alumina fibre with a content of more than 72%), which is a high-quality lightweight high-temperature resistant polycrystalline non expandable mat material.

The global market for alumina fibers may expand as more industries recognize the benefits of these materials, especially in emerging economies with growing industrial sectors. Availability of raw materials and supply chain disruptions can influence the alumina fiber market, especially if there are fluctuations in the supply of key components. Alumina fibers are used in the aerospace and defense industries for applications requiring high-temperature resistance and mechanical strength. These include aircraft and spacecraft components, missile systems, and armor materials. Market trends in these industries can significantly impact the demand for alumina fibers. Alumina fibers are used in the automotive sector for applications such as exhaust system components, catalytic converters, and brake systems due to their ability to withstand high temperatures and corrosive environments. The growth of the automotive industry and the increasing demand for lightweight and durable materials can drive the market for alumina fibers.
