The global Alumina Pellet market size is predicted to grow from US$ 1007 million in 2025 to US$ 1396 million in 2032; it is expected to grow at a CAGR of 4.9% from 2026 to 2032.

Alumina Pellets are sintered or calcined spherical granules made from high-purity aluminum oxide (Al?O?), typically produced through processes such as spray drying, pressing, or granulation, and are widely used as catalyst supports, adsorbents, polishing media, and feedstock in ceramic and metallurgical applications. Their supply chain begins with the mining and refining of bauxite ore into alumina through the Bayer process, followed by purification and calcination into activated alumina or tabular alumina powders. These powders are then processed into pellet form through shaping and thermal treatment to achieve mechanical strength, controlled porosity, and high surface area. Downstream, alumina pellets are distributed to sectors such as petrochemicals (catalyst carriers, desiccants), water treatment (fluoride and arsenic removal), abrasives (precision polishing), and advanced ceramics, with global logistics networks ensuring supply from major producers to industries in North America, Europe, and Asia. The global Alumina Pellet market produces about 520,000 tons per year, backed by a capacity of around 680,000 tons. The industry keeps an average gross margin of 28%, with prices ranging from USD 1,600 to 3,200 per ton depending on grade.

United States market for Alumina Pellet is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Alumina Pellet is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
