An aluminium car radiator is a heat sink used for cooling the engine of a car, usually made of aluminium alloy. Its main function is to circulate coolant to dissipate the heat generated by the engine to ensure that the engine is at a suitable operating temperature range, thus ensuring the normal operation of the engine. This radiator is usually located at the front of the car and is enhanced by a fan or other cooling device. Aluminium car radiators play a vital role in the manufacture of automobiles, and the quality of their design and manufacture has a direct impact on the performance and reliability of the vehicle.

According to research team research statistics, the global automotive radiator market sales reached \$8.3 billion in 2023 and is expected to reach \$9.5 billion by 2030, at a compound annual growth rate (CAGR) of 1.8% (2024-2030).
