Aluminium Composite Sheet (also known as Aluminum Composite Panel or ACP) is a widely used construction and decorative material made up of two thin aluminum sheets bonded to a non-aluminum core. The core material can be made of various materials, such as polyethylene (PE), fire-resistant material (FR), or mineral-filled material (MFR), depending on the intended application and requirements. Aluminum composite sheets are widely used in the construction industry for architectural cladding, facade systems, and interior decoration. The material's lightweight nature, durability, and design versatility make it a popular choice for modern buildings, which has driven demand from the construction sector.
