The global Aluminium Fluoride market size is predicted to grow from US\$ 1715 million in 2025 to US\$ 1904 million in 2031; it is expected to grow at a CAGR of 1.8% from 2025 to 2031.

Aluminum fluoride (AlF_3) is a white powder, which is mainly used as an additive for the production of primary Aluminum metal. It essentially lowers the melting point of the alumina feed and together with cryolite; it increases the electrolyte's conductivity of the solution, reducing the electric power consumption. Aluminum fluoride is also used as catalyst of organic synthesis and materials of synthetic cryolite.

The core manufacturers of aluminum fluoride in the world are Fluorsid, DFD, Hunan Nonferrous, PhosAgro and I.C.F., etc., and the top five manufacturers account for about 41% of the market share. Asia-Pacific is the largest market with a market share of around 69%, followed by the Middle East and Africa with a market share of around 12%. In terms of product type, Dry AlF_3 accounts for the largest share, accounting for about 73% of the global market share. In terms of application, Aluminium accounts for 98% of the market share.
