Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Aluminium Internal Floating Roof is a floating roof which floats on the liquid level of the oil tank and rises and falls with the oil. It is the most economical and simple way to reduce the evaporation loss of oil products to cover the liquid surface with this kind of inner floating roof. Under specific circumstances, the data statistics of relevant manufacturers show that the economic value of reducing oil and gas volatilization within 3-6 months is equivalent to the installation and procurement cost of internal floating roof, that is, the internal floating roof cost can be recovered within half a year. It is suitable for all sizes of butt tanks and lap tanks. It does not pollute oil or chemicals, can reduce the volatilization loss of medium and prevent air pollution. It is an ideal inner floating roof (tray). It has the characteristics of low cost, short construction period, corrosion resistance, no volume and long service life.

The global market for Aluminium Internal Floating Roof is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028. Keeping in mind the uncertainties of COVID-19 and Russia-Ukraine War, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.

The APAC Aluminium Internal Floating Roof market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

The United States Aluminium Internal Floating Roof market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.
