Aluminized laser cardboard is a special cardboard material that is usually used to make high-end cards, greeting cards, leaflets and other products. This cardboard is characterized by its surface being sprayed with aluminum and laser treated, giving it a metallic texture and unique glossy effect. The production process of aluminum-sprayed laser cardboard usually includes the following steps: Aluminum spray treatment: The surface of the cardboard is sprayed with aluminum material to give the surface a metallic texture, which increases the texture and visual effect of the cardboard. Laser treatment: The surface of the aluminum-coated cardboard is laser-treated, giving it a unique glossy and visual effect when exposed to light, giving it a sparkling appearance. Aluminized laser cardboard usually has high gloss and visual appeal, and is suitable for the production of printed matter that requires outstanding visual effects, such as high-end greeting cards, leaflets, gift cards, etc. The unique look and feel of this cardboard makes it a popular printing material.
