Aluminized PPE refers to protective equipment made by coating the surface of a substrate with an aluminum layer or using aluminum-containing composite materials, using the high reflectivity and low thermal conductivity of aluminum to provide protection for the human body against heat hazards such as high temperature, flames, and thermal radiation. This type of equipment effectively reduces thermal damage to the human body in high-temperature environments by reflecting heat and reducing heat conduction efficiency. It also has flame retardant and radiation-resistant properties, and is suitable for high-temperature work scenarios such as metallurgy, welding, and firefighting.
