The global Aluminum 2-ethylhexanoate market size is predicted to grow from US$ 9.88 million in 2025 to US$ 13.7 million in 2032; it is expected to grow at a CAGR of 4.9% from 2026 to 2032.

Aluminum 2-ethylhexanoate, as a special organic compound, plays an increasingly important role in the coating industry due to its unique chemical properties. This compound provides excellent hardness and wear resistance for coatings, while also endowing them with excellent weather resistance and chemical resistance.

Firstly, aluminum 2-ethylhexanoate can be used as a thickener and leveling agent to improve the flowability and uniformity of coatings. It helps to form a smooth and uniform coating, reducing brush marks and sagging. This makes the painted surface more beautiful and improves the quality and grade of the product.

Secondly, the hardness and wear resistance of aluminum 2-ethylhexanoate give the coating high scratch and impact resistance. This enables the coating to better resist wear and scratches in daily use, extending the service life of the coating.

In addition, aluminum 2-ethylhexanoate also has good weather resistance and chemical resistance. It can withstand environmental factors such as ultraviolet radiation, oxidation, and chemical corrosion, while maintaining the integrity and aesthetics of the coating. This makes aluminum isooctanoate an important component in outdoor coatings and industrial coatings with special chemical requirements.

In 2024, global Aluminum 2-ethylhexanoate production reached approximately 3,484 MT, with an average global market price of around US$ 2,764 per MT.A single
