The global Aluminum Adjuvanted Vaccines market size is predicted to grow from US\$ 816 million in 2025 to US\$ 1417 million in 2031; it is expected to grow at a CAGR of 9.6% from 2025 to 2031.

The mechanism of action of aluminum adjuvant mainly includes storage effect and immunostimulatory effect. Aluminum adjuvant can also stimulate innate immunity and induce monocytes to secrete IL-1 β and IL-18 by activating Nlrp3 inflammasome. In addition, aluminum adjuvant can stimulate necrotic cells at the injection site to release damage-associated pattern molecules (DAMPs) such as DNA, ATP, and uric acid, and the released DAMPs help the interaction between dendritic cells and CD4 $^{+}$ T cells.

Vaccination programs are essential for the prevention of infectious diseases, and aluminum adjuvanted vaccines play an important role in many immunization programs. Rising awareness regarding the importance of vaccination and expanding vaccination programs across the globe is boosting the demand for aluminum adjuvanted vaccines.
