Aluminum alloy hot-rolled coil refers to the process of processing aluminum alloy billets into coil products of a certain thickness, width and length through a high-temperature hot rolling process. This process presses and deforms the aluminum alloy under high temperature conditions, giving it good mechanical properties and processing properties. Aluminum alloy hot-rolled coils are mainly composed of aluminum and other alloy elements, which usually include copper, magnesium, zinc, silicon, etc. to improve their strength, hardness and wear resistance. Aluminum alloy hot-rolled coils have good corrosion resistance and can remain stable in a variety of environments.
