## Abstracts

The global Aluminum Alloy Motorcycle Components market size is predicted to grow from US\$ 5917 million in 2025 to US\$ 8828 million in 2032; it is expected to grow at a CAGR of 5.9% from 2026 to 2032.

In 2025, global sales of aluminum alloy motorcycle components reached approximately 126 million units, with an average selling price of around \$48 per unit. The total global production capacity for these components stood at approximately 155 million units per year, and the industry's average gross profit margin ranged from 22% to 30%.

Aluminum alloy motorcycle components are lightweight parts—manufactured primarily from aluminum alloy via processes such as die-casting, forging, extrusion, CNC machining, stamping, and heat treatment—that serve structural, powertrain, braking, suspension, and aesthetic functions; key examples include wheels, frame components, swingarms, engine casings, spokes, brake calipers, brackets, and body connectors. Compared to traditional steel parts, aluminum alloy components offer advantages such as low density, high strength, corrosion resistance, and excellent heat dissipation; they effectively reduce overall vehicle weight while enhancing handling, fuel economy, and the range of new energy motorcycles, finding wide application in standard motorcycles, electric motorcycles, high-performance sports bikes, racing motorcycles, and luxury models.

Upstream raw materials include aluminum alloy ingots, aluminum rods, silicon-aluminum alloys, magnesium-aluminum alloys, alloying additives, mold materials, and processing auxiliaries; the midstream consists of manufacturers responsible for product design, material forming, precision machining, heat treatment, anodizing, and quality inspection; and the downstream market primarily supplies electric motorcycle manufacturers. As global trends toward lightweighting, high performance, and

electrification continue to advance, aluminum alloy components will increasingly replace certain steel structural parts. The industry will focus on developing high-strength aluminum alloys, integrated die-casting technology, precision forming for complex structural parts, and the use of recycled aluminum materials; new energy motorcycles and high-performance models will serve as key growth drivers, offering significant potential for market expansion and technological upgrades.

United States market for Aluminum Alloy Motorcycle Components is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Aluminum Alloy Motorcycle Components is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Aluminum Alloy Motorcycle Components is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Global key Aluminum Alloy Motorcycle Components players cover KOBELCC, AI Forge Tech, Yi-Chen Industrial, OZ Racing, Talon Engineering, etc. In terms of revenue, the global two largest companies occupied for a share nearly % in 2025.
