Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Aluminum alloy motorcycle wheels bring a better sense of direction and control because of their greater rigidity. At the same time, after intense driving and long-term use, there is no need to perform maintenance such as tightening screws like spoke hubs.

Aluminum alloy wheels with a larger area and relatively brittle texture are prone to deformation or cracking when encountering strong impacts. Once these two conditions are encountered, the tires will be affected and even worse.

The global market for Aluminum Alloy Motorcycle Wheels is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028. Keeping in mind the uncertainties of COVID-19 and Russia-Ukraine War, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.

The APAC Aluminum Alloy Motorcycle Wheels market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.
