The global Aluminum Alloy Transmission Housing market size is predicted to grow from US\$ 7076 million in 2025 to US\$ 9723 million in 2032; it is expected to grow at a CAGR of 4.7% from 2026 to 2032.

In 2025, global Aluminum Alloy Transmission Housing production reached approximately 65.76 million units , with an average global market price of around US\$110 per unit.

An aluminum alloy transmission housing is a key structural component used to enclose, support, seal, and mount an automotive transmission assembly. It houses gears, shafts, bearings, clutch components, hydraulic passages, valve bodies, sensors, and lubrication systems, while providing dimensional accuracy, mechanical rigidity, heat dissipation, and protection for power-transmission parts. The product is generally manufactured through high-pressure die casting, low-pressure casting, gravity casting, or semi-solid forming, followed by CNC machining, cleaning, leakage testing, dimensional inspection, and surface treatment. Compared with cast-iron housings, aluminum alloy transmission housings offer lower weight, better thermal conductivity, high design flexibility for complex geometries, and good suitability for mass production. They are widely used in passenger cars, commercial vehicles, hybrid vehicles, and new energy vehicle driveline systems. Common materials include ADC12, A380, A383, AlSi9Cu3, and AlSi10Mg aluminum alloys, with ADC12/A383 often selected for complex thin-wall die-cast parts and A380 widely used in automotive aluminum die casting.

The upstream supply chain of aluminum alloy transmission housings mainly includes primary aluminum ingots, recycled aluminum, aluminum-silicon alloys, aluminum-copper alloys, magnesium, silicon, copper, die-release agents, cutting fluids, mold steel, die-

casting molds, CNC tools, sealing materials, and surface-treatment chemicals. Among these, aluminum alloy materials and die-casting molds have a direct impact on cost, dimensional stability, casting quality, and yield. Representative raw material or aluminum suppliers include Aluminum Corporation of China, Nanshan Aluminum, Hydro, Rusal, Alcoa, Rio Tinto, Constellium, and UACJ. The midstream consists of aluminum die-casting and precision-machining manufacturers that perform casting, CNC machining, leakage testing, cleaning, inspection, and pre-assembly processing. The downstream customers are mainly transmission manufacturers, automakers, and new energy vehicle powertrain suppliers. Major application industries include passenger cars, commercial vehicles, hybrid vehicles, battery electric vehicle reducers, e-drive systems, automatic transmissions, DCT, AT, CVT, AMT, and commercial vehicle transmissions. Representative downstream companies include Toyota, Volkswagen, General Motors, Ford, Hyundai, BYD, Geely, SAIC, ZF, Aisin, BorgWarner, Magna, Schaeffler, JATCO, and Eaton.

The aluminum alloy transmission housing market is in a stage of steady upgrading. Traditional internal combustion engine transmissions continue to provide basic demand, while hybrid vehicles and new energy vehicle e-drive systems are pushing housing products toward lighter weight, higher integration, better precision, and improved air-tightness. Current competition mainly focuses on die-casting capability, mold development, CNC machining accuracy, yield control, and OEM qualification capability. Suppliers with large die-casting machines, automated machining lines, and co-development capabilities are more likely to enter mainstream automotive supply chains. Key market drivers include vehicle lightweighting, energy-saving and emission-reduction requirements, integration of e-drive systems, increasing complexity of hybrid transmissions, and the replacement of cast iron with aluminum alloy. Unfavorable factors include aluminum price volatility, rising energy costs, high mold investment, long customer certification cycles, strong customization requirements, and continuous price pressure from automakers. Overall, the market is shifting from simple price competition toward competition in material optimization, structural integration, precision machining, and quality stability.
