Abstracts

The global Aluminum Borate Whiskers market size is predicted to grow from US\$ 79.96 million in 2025 to US\$ 115 million in 2032; it is expected to grow at a CAGR of 5.4% from 2026 to 2032.

Aluminum borate whiskers are needle-shaped single-crystal fibers produced under artificial control. They possess high elastic modulus, excellent mechanical strength, heat resistance, and chemical corrosion resistance, making them a high-performance inorganic material.

The basic raw materials include high-purity alumina and boron oxide or boric acids. The upstream technological barriers lie in controlling the purity of the raw materials and stabilizing the process parameters for whisker growth. Downstream applications are mainly concentrated in fields with stringent requirements for material properties.

Global sales in 2024 were approximately 600 tons, with an average market price of approximately US\$130/kg. The industry's gross profit margin ranges from 10% to 25%.
