The global Aluminum Chromium Sputtering Target market size is predicted to grow from US\$ 561 million in 2025 to US\$ 884 million in 2032; it is expected to grow at a CAGR of 6.7% from 2026 to 2032.

Aluminum chromium sputtering targets are alloy targets with aluminum (Al) and chromium (Cr) as the main components. They are primarily used in PVD processes such as magnetron sputtering to prepare wear-resistant, high-temperature-resistant, and corrosion-resistant functional thin films. They are commonly used as the metal source for hard coatings such as AlCrN and AlCrON, and are widely applied in tools, molds, machinery, and functional films. Upstream applications mainly include high-purity aluminum and high-purity chromium metal raw materials, as well as powder metallurgy raw materials, HIP energy, and target backsheet materials. Downstream applications are concentrated in hard tool coatings, mold surface strengthening, wear-resistant coatings for automotive parts, and the manufacturing of electronic and decorative functional thin films.

The global average price of aluminum-chromium sputtering targets is US\$85,000 per ton, with sales of approximately 6,750 tons and a global production capacity of 7,000 tons. The industry profit margin is 22%.

Global Market Future Development Trends: With improved machining efficiency, increased mold life requirements, and the accelerating trend towards lightweighting in automotive and equipment manufacturing, the penetration rate of high-performance hard coatings such as AlCrN continues to rise. Compared to traditional TiN and CrN systems, the advantages of aluminum-chromium systems in high-temperature stability and oxidation resistance have led to steady growth in demand for aluminum-chromium

sputtering targets in the mid-to-high-end tool and industrial coating markets.

The global market is rapidly upgrading from traditional cast-target powder metallurgy and HIP targets, with high-density, high-composition-uniformity targets becoming mainstream. Simultaneously, the increasing proportion of high-end forms such as rotating targets and dedicated HiPIMS targets is driving up unit value and technological barriers, resulting in a 'stable volume, rising prices, and optimized structure' characteristic of the industry.

Europe and Japan still maintain a technological advantage in the high-end target field, while Chinese companies are rapidly catching up in cost control and capacity expansion, gradually penetrating the mid-to-high-end market. In the coming years, the global aluminum-chromium sputtering target market will maintain steady growth driven by manufacturing upgrades and domestic substitution, evolving towards higher purity, higher consistency, and customization.
