Aluminum DRD Cans are two-piece aluminum cans produced by the draw-and-redraw (DRD) process. In this process, a pre-coated or pre-printed aluminum sheet is first drawn into a cup and then redrawn to reach the required final dimensions. The can body and bottom are formed as one integral piece, and only the top end is added later by seaming. Compared with draw-and-wall-ironed cans, Aluminum DRD cans are shaped mainly through redrawing rather than extensive wall ironing, and they are widely used for food packaging where strength, shape flexibility, and product protection are important.
