Aluminum electrolytic capacitors are electronic components used for storing and regulating electrical energy in various electronic circuits. The 'paper' component in aluminum electrolytic capacitors refers to the material used as the dielectric (insulating layer) between the two electrodes. This dielectric is crucial for the capacitor's performance and characteristics.

Traditionally, the dielectric paper used in aluminum electrolytic capacitors was made from high-purity, cellulose-based paper. This paper is impregnated with a liquid or solid electrolyte, which enhances the capacitor's capacitance and performance. The impregnation process involves soaking the paper in a solution containing electrolyte materials such as ammonium borate or other electrolyte salts.
