Aluminum Frame Double Hung Window is a vertically sliding window that features two operable sashes—both the upper and lower panels can move independently within an aluminum frame. This design allows for enhanced ventilation flexibility, as users can open either or both sashes to control airflow. The aluminum frame provides superior durability, strength, and resistance to corrosion, making it ideal for long-term performance in both residential and commercial applications. Unlike wood, aluminum requires minimal maintenance and is not prone to warping, swelling, or rotting. Double hung windows are particularly valued for their space-saving functionality, as they do not protrude outward or inward when opened, making them suitable for rooms facing walkways, patios, or exterior structures. In addition to functionality, modern aluminum double hung windows are often equipped with energy-efficient glazing, weather stripping, and thermal breaks to improve insulation performance.
