The global Aluminum Liquid Cooling Plate market size is predicted to grow from US\$ 1587 million in 2025 to US\$ 2109 million in 2032; it is expected to grow at a CAGR of 5.8% from 2026 to 2032.

In 2025, global Aluminum Liquid Cooling Plate production reached approximately 29,500 k units with an average global market price of around US\$ 55 per unit, and a gross profit margin of approximately 20%-40%. An Aluminum Liquid Cooling Plate is a type of cooling plate made from aluminum, used in liquid cooling systems to absorb and dissipate heat from components such as electronics or power devices. The aluminum material provides good thermal conductivity, allowing for efficient heat transfer. The liquid coolant circulates through channels or grooves within the cooling plate, drawing heat away from the surface and maintaining optimal operating temperatures.

The aluminum liquid cooling plate market is driven by increasing demand for advanced thermal management solutions in data centers, electric vehicles, and power electronics. As power density rises, traditional air cooling becomes insufficient, accelerating the adoption of liquid cooling technologies. Aluminum-based plates offer a cost-effective and lightweight alternative with good thermal performance. Growth in AI computing, high-performance servers, and EV battery systems further supports market expansion. Manufacturers are focusing on improving channel design, enhancing corrosion resistance, and optimizing manufacturing processes. Sustainability and energy efficiency are also key drivers shaping product innovation and market development.
