Aluminum-molybdenum alloy is a metal alloy with aluminum and molybdenum as the main components. It combines the excellent properties of the two metals and has a wide range of application prospects. Aluminum is a lightweight metal with good electrical conductivity, thermal conductivity and corrosion resistance, while molybdenum is a high melting point metal with excellent mechanical strength, high temperature resistance and good electrical conductivity. By combining these two metals, aluminum-molybdenum alloy retains the lightweight and corrosion resistance of aluminum while enhancing its strength and high temperature resistance.
